Portfolio

iSport (Rails, React/Redux, PostgreSQL) | sole developer

project link |

Full-Stack Web Application inspired by Feedly

- Utilized AJAX requests to an external api to receive up-to-date feeds on every navigation within React Router
- Generated a modal for each article to allow users to easily navigate between articles
- Integrated Single Responsibilities Principal by binding front-end views with React to provide rich, seamless user experience

Trip Planner (Javascript/HTML5) | sole developer

project link |

Traveling Salesperson Problem Visualization

- Implemented Genetic Algorithm to produce the optimal route for TSP
- Utilized Google Map Polyline API to render each step of the algorithm
- Incorporated Google Map API with Google Marker API to allow users to select up to 10 destinations

Fantasy Investing (Django, React/Redux) | co-developer

project link |

Stock Trading Simulating Web Application

- Integrated up-to-date stock data using external api to simulate real life stock trading experience for users
- Utilized d3.js to display users' portfolio's performance and interested companies' stock price over time
